

Mary Claire Azalea
Rhododendron 'Mary Claire'

Height: 8 feet

Spread: 8 feet

Sunlight:

Hardiness Zone: 4b

Group/Class: Exbury Hybrids

Description:

An interesting variety with lovely butter, yellow, and coral blooms that progress to cream with a yellow blotch; blooms cover the branches in mid spring; showy when massed in a border; absolutely must have well-drained, highly acidic and organic soil

Ornamental Features

Mary Claire Azalea is covered in stunning clusters of lightly-scented buttery yellow trumpet-shaped flowers with coral-pink overtones and a yellow blotch at the ends of the branches in mid spring, which emerge from distinctive coral-pink flower buds before the leaves. It has green foliage throughout the season. The narrow leaves turn an outstanding red in the fall. The fruit is not ornamentally significant.

Landscape Attributes

Mary Claire Azalea is an open multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Mary Claire Azalea is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

Planting & Growing

Mary Claire Azalea will grow to be about 8 feet tall at maturity, with a spread of 8 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the leaves in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
